

Anti Human Ajuba Polyclonal Antibody

Aurora-A(Aurora-A/STK-15/Aik) encoding a centrosome-associated Ser/Thr kinase, is amplified and overexpressed in many cancer cell types, and is involved in the induction of centrosome duplication-distribution abnormalities and aneuploidy in mammalian cells. In vitro transformation activity of Aurora-A suggested to be a potential oncogene. Recent research elucidated that Ajuba, Aurora-A binding protein, induces the autophosphorylation and consequent activation of Aurora-A . In the future this antibody will contribute the research progress whether Ajuba and Aurora-A are involved in tumorigenesis. This antibody is useful for immunoprecipitation and immunocytochemistry.

Package Size	25 μ g (100 μ L/vial)
Format	Rabbit polyclonal antibody 0.25mg/mL
Buffer	PBS [containing 2% Block Ace as a stabilizer, 0.1% Proclin as a bacteriostat]
Storage	Below -20°C
Purification method	This antibody was purified from rabbit serum by affinity chromatography.
Working dilution	For Immunoprecipitation ; 10 μ g/mL For Immunocytochemistry ; 2 ~ 5 μ g/mL

Immunocytochemistry

Sample : HeLa Cell

Preparation of antibodies and instruction :

Dr. Saya H. and Dr. Hirota T. at Department of Tumor Genetics and Biology, Kumamoto University School of medicine.
